Custom Approach + Well-Capitalized Facilities: A Powerful Combination

Learn more about our Capabilities

True Innovation – From Deep in the Heart of Texas, Since 1979

Plenty has changed in packaging and poly since 1979. We've seen thinner films, more durable poly, improvements in printing, and the emergence of exciting innovations in biopolymers. With each innovation, Houston Poly has been able to grow our business by expanding what we can offer our customers across North American – and throughout the world.

Innovation Alone Isn't Enough

True innovation combines technology with expertise and service. What's an innovation if you don't understand how it can help your business, or you can't get someone to pick up the phone? That may seem old fashioned, and we suppose it is. As we enter our fifth decade in business, the innovations we're most proud of are the improvements we've made in how we take care of our customers:

- We're conservative with our financial planning, offering us flexibility when our customers need that from us
- We've established long-term supply chain relationships that help us provide the best value for our customers
- We've invested in our Gulf Coast facility, allowing us to expand our service and product offering, while also providing some of the best shipping and transportation options

Beginning with the End in Mind

Houston Poly is deeply committed to compostable films and believes in their potential to scale when deployed in a targeted and impactful way. Soil biodegradable mulch films and lamination grade films destined for multi-layer compostable food packaging are two such examples that we have heavily invested in. Every major compostable resin supplier is represented at Houston Poly allowing customers to select the mechanical attributes and end of life option most appropriate and cost effective to their application. Our investment in 3 and 5-layer MDO extrusion technologies ensure we deliver high performance film for any application.

As a business we measure true sustainability when an innovation such as compostable films begins to scale and diffuse. We see the steady increase in demand for sustainable products each year and we're inspired when our technology partners have pushed the boundaries of compostable polymers to create new or improve upon existing ones. At Houston Poly, we are committed to supporting and driving sustainable innovation that's good for our planet and good for business.

Taking our own advice...

Learn more about Sustainability

Our Products:

Bags, Liners, Sheeting & Tubing

At Houston Poly, we offer a full assortment of custom bags, liners and tubing. Capabilities include both mono-layer and co-extrusion blown film using LDPE, LLDPE and other resin blends. We also offer bio resin options.

Specialty Films & Protective Wraps

Specialty films include bio resin used for Ag and food packaging. Our specialty films can be used as a standalone product or laminated to other layers by a converter as a barrier or for sealability with consumer goods.

Flexible Packaging

Flexible packaging includes film used for automation. We can design the film that best works on your equipment and can make large diameter rolls with good gauge control for better sealing ability and less down time changing rolls.
