Guardian™ Film

Film Characteristics

Guardian Film™ is a PVC-Like Polyethylene Meat Wrap film which helps meat producers and meat packers to conveniently replace non-recyclable PVC films.

This recyclable Polyethylene film is functionally superior to conventional PVC films. Guardian Film™ PVCL PE Meat films have the same virtuous characteristics of PVC films like softness, tackiness, and transparency while providing meat packers and producers the following benefits of Polyethylene films:

- High permeability and controlled water vapor transmission rates which helps in increasing the shelf life of the meat.
- Provide 30-40% savings in cost along with plastic reduction due to the down-gauging effects of Polyethylene.
- Does not contain toxic plasticizers such as phthalates, hazardous heavy metals such as lead and mercury, fungicides and other toxic substances that are harmful for human health.
- Does not crack at sub-zero temperatures of up to -22 degrees Fahrenheit.
- The films are odorless and run efficiently on all the Auto-tray wrapping machines.

Excellent Breathability

Resistance to Extreme Cold

Optimum Cling

Does Not Contain Plasticizers, Stabilizers

Better Organoleptic Properties
