Guardian™ Film

Film Variants

Guardian Film™ PVC-Like Polyethylene Meat Wrap Films (PVCL PE) are recognized and awarded among the most innovative products in some of the biggest Meat trade shows of the industry, to counter the ecological strain caused by the much-debated PVC films. It is now time-tested that the user will find no functional difference in usage of our PVCL Meat film as compared to PVC films.

Our Meat Wrap Films meet the latest food contact regulations as per FDA - 21 CFR 177.1520. Polyethylene (PE), is a simple structure polymer that has the least environmental impact. It is easily recyclable and when annihilated, it burns to hydrogen and carbon without any polluting content.

Polyethylene Meat Films are an ideal replacement for conventional films that contain toxic plasticizers (such as phthalates), hazardous heavy metals (such as lead and mercury), fungicides and other toxic substances that are harmful to human health.
